Math-3
Lesson 5-4
The Logarithm Function

Finding the Inverse: exchange the locations of ‘x’ and ‘y’ in the equation then solve for ‘y’.

$$f(x) = (x-2)^{\frac{2}{3}}$$

$$y = (x-2)^{\frac{2}{3}}$$

$$x = (y-2)^{\frac{2}{3}}$$

$$(x)^{\frac{3}{2}} = \left((y-2)^{\frac{2}{3}}\right)^{\frac{3}{2}}$$

$$x^{\frac{3}{2}} = y - 2$$

$$y = x^{\frac{3}{2}} + 2$$

$$f^{-1}(x) = x^{\frac{3}{2}} + 2$$

Domain, Range, and Inverse Functions

Domain: The input values (that have corresponding outputs)

Range: The output values (that have corresponding inputs)

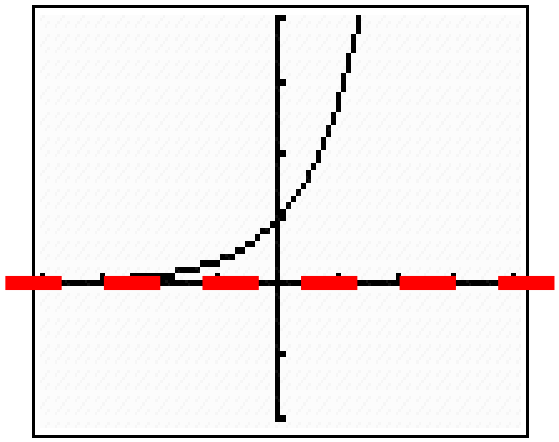
Inverse of a Function: A function resulting from an "exchange" of the inputs and outputs.

$f(x): Domain, Range$

$f^{-1}(x):$ Domain = range of f(x)

Range = domain of f(x)

Exponential Function



$f(x) = 10^x$

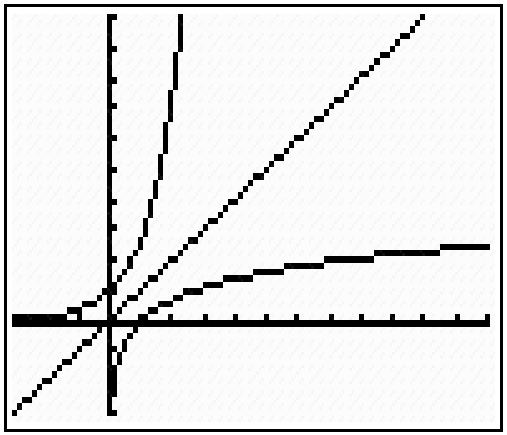
Domain = ? (-∞, ∞)

Range = ? (0, ∞)

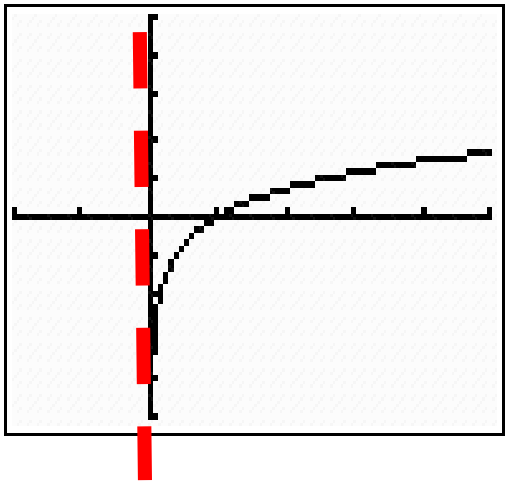
Horizontal asymptote = ?

y = 0

Inverse Functions



Logarithm Function



$f^{-1}(x) = log_{10}(x)$

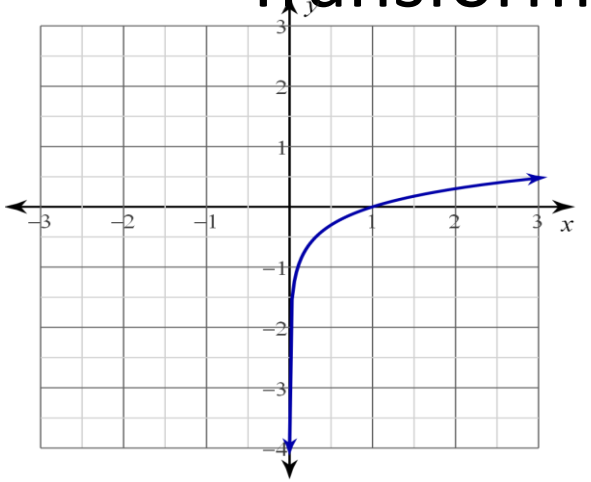
Domain = ? (0, ∞)

Range = ? (-∞, ∞)

Vertical asymptote = ?

x = 0

Transformations of the Log Function



$f(x) = \log x$

Domain = ? (0, ∞)

Range = ? (-∞, ∞)

vertical asymptote = ?

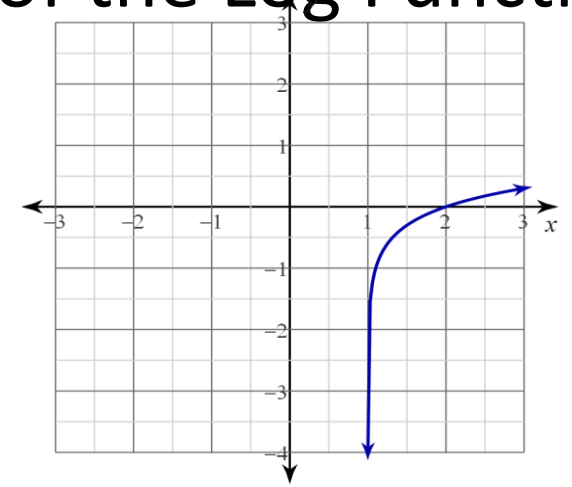
x = 0

X-intercept = ?

x = 1

Where increasing = ?

(0, ∞)



$g(x) = \log(x-1)$

Right 1 shift

Domain = ? (1, ∞)

Range = ? (-∞, ∞)

asymptote = ? x = 1

Logarand

$$g(x) = 3\log(2x - 1) + 5$$

Logarand

Vertical Asymptote: The value of ‘x’ that makes the logarand equal to zero.

Vertical asymptote = ?

$2x - 1 = 0$

$x = \frac{1}{2}$

Evaluating Logs on your calculator

$\log 8 = ?$

Push buttons:

[log] [8)] [=] 0.903089987

$\ln 10 = ?$

Push buttons:

[ln] [10)] [=] 2.302585093

$\log 0 = ?$ error Why?

Only input values x = (0, ∞) have corresponding outputs.

$\log(-3) = ?$ error Why?

-3 is not in the “domain” of the function.

Transformations of the Log Function

$$f(x) = \log x$$

$$g(x) = 2\log(x+1) - 3$$

VSF = 2

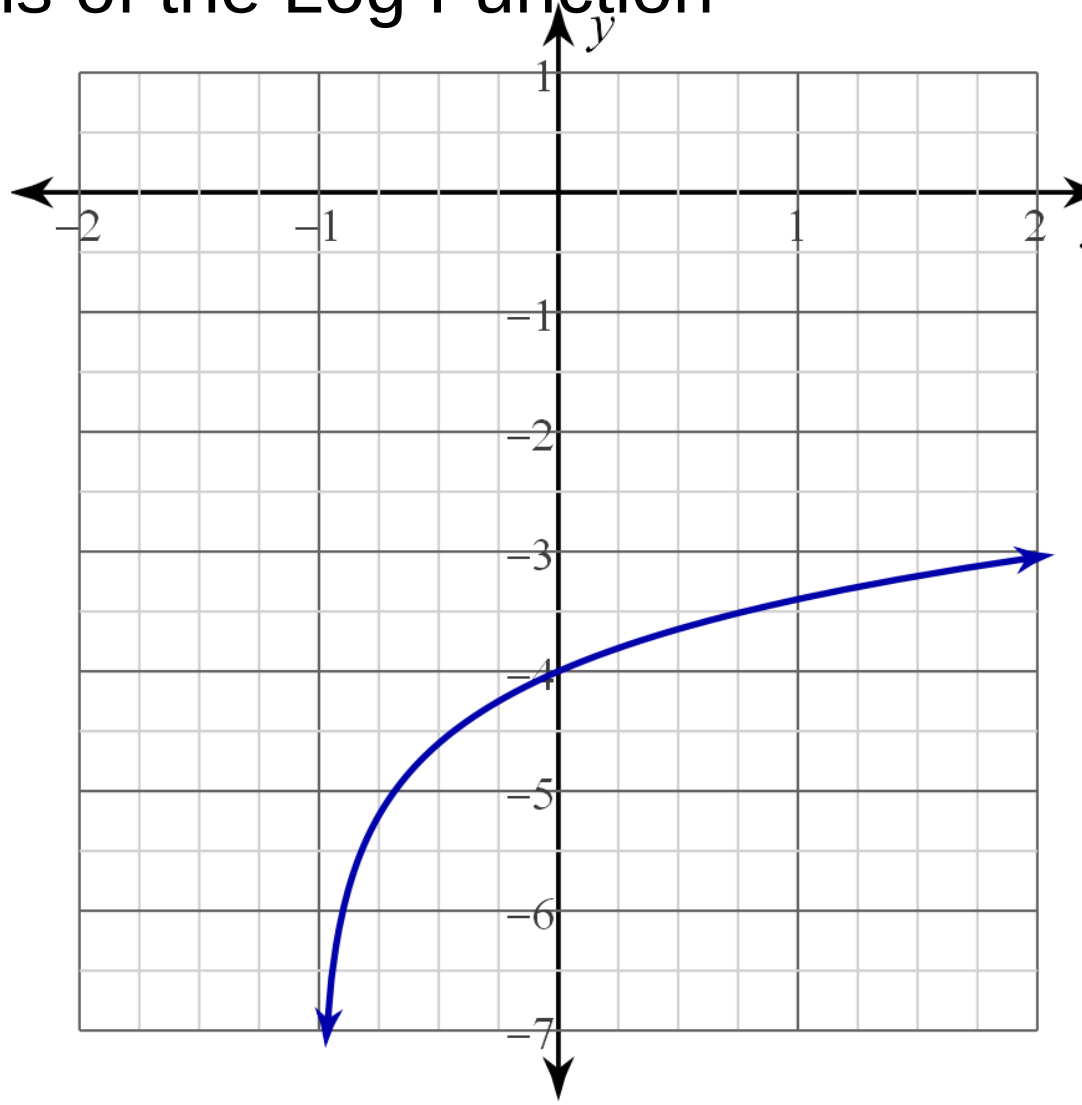
left 1 translation

Down 3 translation

<u>Domain</u> = ? x = (-1, ∞)

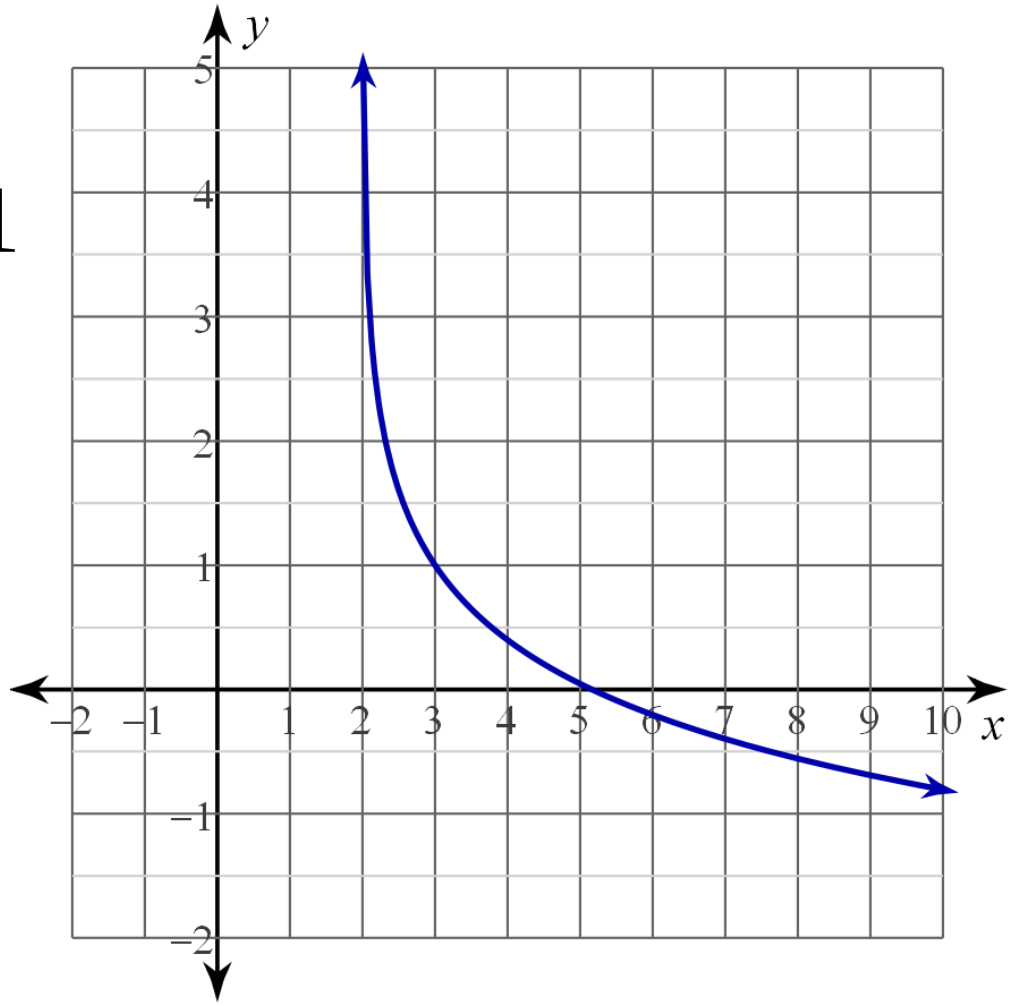
<u>Range</u> = ? (-∞, ∞)

<u>Asymptote</u> = ? x = -1



$$f(x) = \log x$$

$$g(x) = -3\log(x-2)+1$$



Reflected → x-axis
VSF = 3
Right 2 translation
Up 1 translation

Domain = ? x = (2, ∞)

Range = ? (-∞, ∞)

Asymptote = ? x = 2

NOT exponential (has a vertical asymptote, does NOT have a horizontal asymptote.

What is a logarithm?

A logarithm is another way of writing an exponent.

$$2^x = 8$$

x is the exponent

$$\log_2 8 = x$$

Log = exponent

Both of these equations are saying the same thing:
"2 raised to what power is 8?"

Exponential Form  Logarithm Form 
$$2^3 = 8$$

base

$$\log_2 8 = 3$$

base

"base 2 raised to the 3rd is 8"

"log base 2 of 8 is 3"

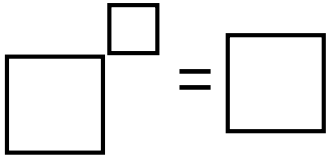
$$3^x = 9$$

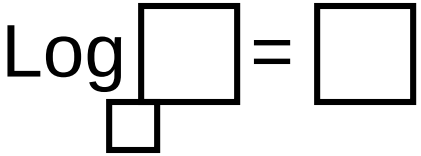
What exponent of 3 equals 9?

$$\log_3 9 = x$$

What exponent of 3 equals 9?

x = 2

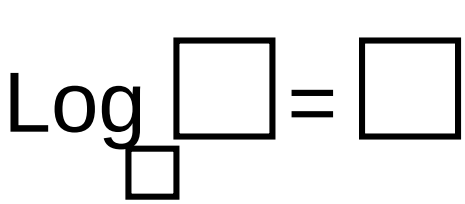


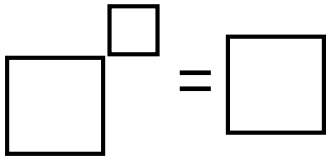


What is the solution?

Convert to logarithm form

x = 2	$5^x = 25$	$\log_5 25 = x$
x = 3	$4^x = 64$	$\log_4 64 = x$
x = ???	$b^x = y$	$\log_b y = x$
x = 2	$9^x = 81$	$\log_9 81 = x$
x = 3	$10^x = 1000$	$\log_{10} 1000 = x$





What is the solution?

Convert to exponential form

x = 2 $\log_{10} 100 = x$ $10^x = 100$

x = 3 $\log_3 27 = x$ $3^x = 27$

x = 0 $\log_9 1 = x$ $9^x = 1$

x = 16 $\log_4 x = 2$ $4^2 = x$

x = 32 $\log_2 x = 5$ $2^5 = x$

Common Logarithm: has a base of 10.

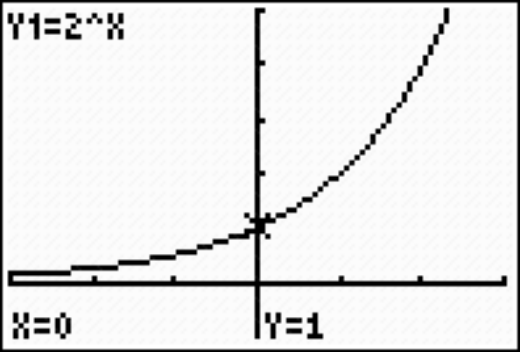
$$\log_{10} 100 = x$$

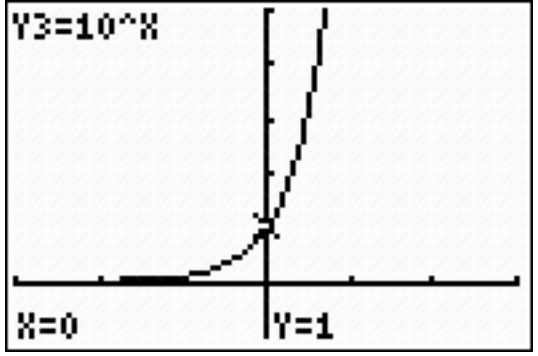
We usually write it in this form: $\log 100 = x$

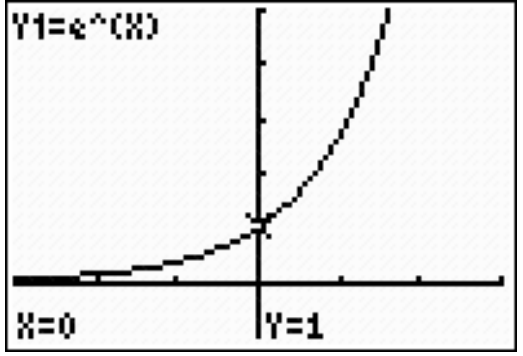
Natural Logarithm: has a base of e.

$$\log_e 2.718 = 1$$

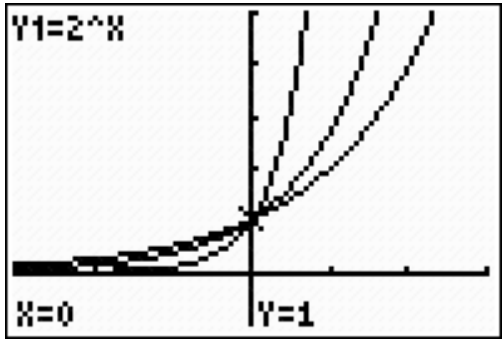
We always write it in this form: $\ln 2.718 = 1$

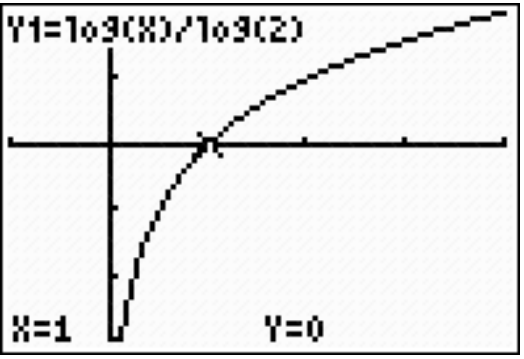


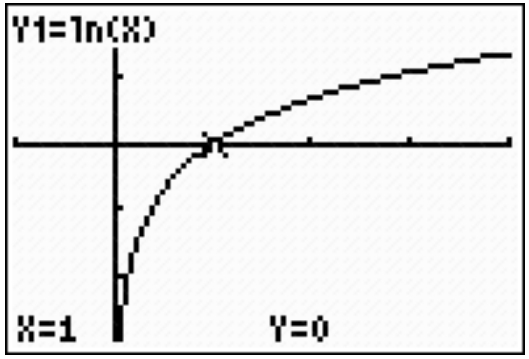


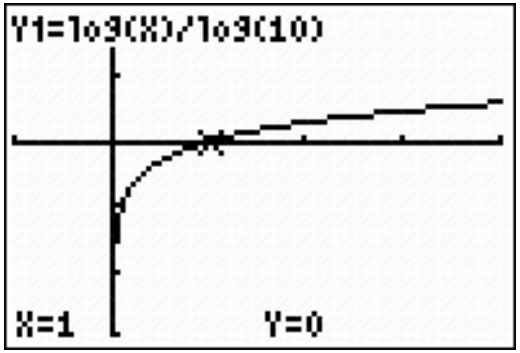


Base increasing: →

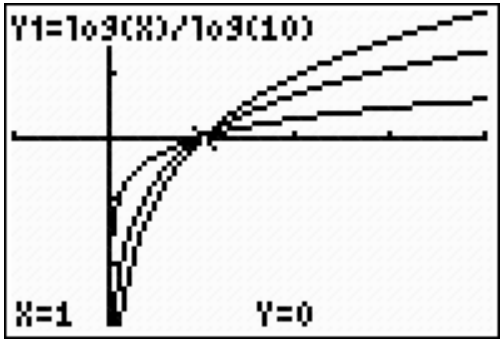








Base increasing: →



What is the base?

$\log_2 8 = x$ $\ln 5 = x$ $\log 20 = x$

What is the Solution?

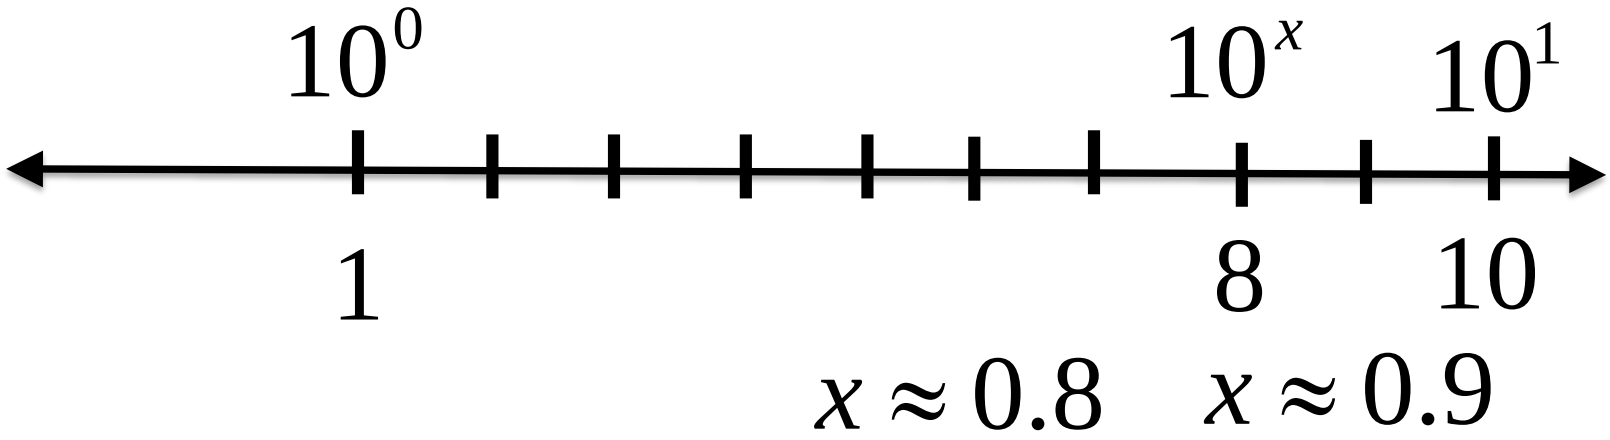
$\frac{1}{100} = log_{10}(x)$ $x = -2$

$x = log_2\sqrt{2}$ $x = \frac{1}{2}$

$x = log_5 \frac{1}{\sqrt[3]{5}}$ $x = -\frac{1}{3}$

Estimate the value of the log: $log(8)$

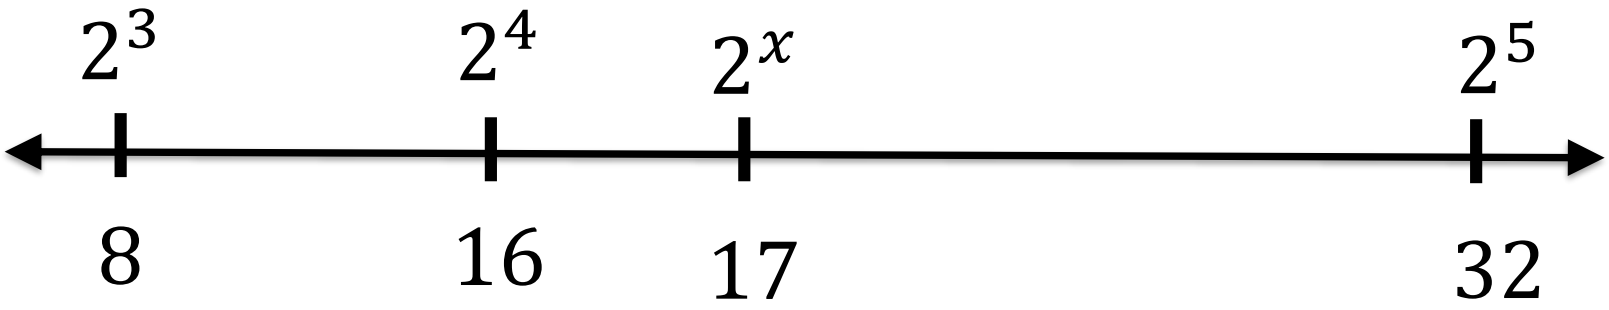
$$\log 8 = x \qquad 10^x = 8$$



Find $\log 8$ on your calculator. $\log 8 = 0.903$

Estimate the value of the log: $\log_2 17$

$$\log_2 17 = x \quad \rightarrow 2^x = 17$$



$$x \approx 4.1 \ ?$$

Find $\log_2 17$ on your calculator. $\log_2 17 = 4.09$

Estimate the value of the log (without using your calculator)

$log_3 30$ $log_5 30$ $log_6 30$

Finding the Inverse $f^{-1}(x) = ?$

$f(x) = 3^x$ Shift ‘x’ and ‘y’

$x = 3^y$ “Undo the Exponential” (Convert it to a log)

“A log is an exponent”

$y = \log_3 x$ $\boxed{f^{-1}(x) = \log_3 x}$

Finding the Inverse $f^{-1}(x) = ?$

$f(x) = (3)^{x-1} + 2$ Shift ‘x’ and ‘y’

$x = (3)^{y-1} + 2$ “isolate” the exponential”

$x - 2 = (3)^{y-1}$ “Undo the Exponential” (Convert it to a log)

“A log is an exponent”

$y - 1 = \log_3(x-2)$

$y = \log_3(x-2) + 1$

$f^{-1}(x) = \log_3(x-2) + 1$

Finding the Inverse $f^{-1}(x) = ?$

$f(x) = (3)^{x-1} + 2$ $\quad f^{-1}(x) = \log_3(x-2) + 1$

Right 1 → up 2

Right 2 → up 1

Finding the Inverse $f^{-1}(x) = ?$

$f(x) = 2\log_2(x+1)$ Shift ‘x’ and ‘y’

$x = 2\log_2(y+1)$ “Isolate the log”

$\frac{x}{2} = \log_2(y+1)$ “Undo the log” (Convert it to an exponential)

“A log is an exponent”

$y+1 = 2^{x/2}$

$y = 2^{x/2} - 1$ $\qquad f^{-1}(x) = 2^{x/2} - 1$
